

Survey of Occupational Injuries and Illnesses, 1994

U.S. Department of Labor
Bureau of Labor Statistics
April 1996

Summary 96-11

Wide variations exist in the frequency of nonfatal workplace incidents by industry, even for industries producing similar types of goods and services. For example, the total case rate for injuries and illnesses in the major industry group, primary metal manufacturing (Standard Industrial Classification—SIC 33), was 16.8 per 100 full-time workers in 1994. At the group's detailed level, the total case rates ranged from 30.2 in gray and ductile iron foundries (SIC 3321) to 6.4 in primary copper (SIC 3331). (See table 1.)

There were approximately 6.8 million nonfatal injuries and illnesses reported in private industry in 1994, and they were found in every major industry. Manufacturing accounted for one-third of the total (nearly 2.2 million cases), and wholesale and retail trade and services each accounted for about one-fourth of the cases. Table 2 shows the number of injuries and illnesses in 1994, by industry.

This summary report provides industry detail on results of the 1994 Survey of Occupational Injuries and Illnesses conducted by the Bureau of Labor Statistics. Data for major industrial groups (such as lumber and wood products, special trade contractors, and health services) were published at the end of 1995.¹ The tables in this report provide more detailed industry information than has been previously published (incidence rates and number of cases) on nonfatal workplace injuries and illnesses for 3- and 4-digit industries (e.g., millwork, water well drilling, and hospitals), as defined in the 1987 edition of the *Standard Industrial Classification Manual*.

The 1994 survey measured nonfatal injuries and illnesses only. It sampled 250,000 establishments. BLS surveys of occupational injuries and illnesses before 1992 covered both fatal and nonfatal incidents. Because of their relatively rare occurrence, work related fatalities cannot be accurately measured through a sample survey of this size. To better address fatalities in the workplace, BLS developed the National Census of Fatal Occupational Injuries.

Nationwide results of the 1994 fatality census were released in August 1995.²

In addition to the injury and illness summary data presented in this summary report, the 1994 BLS survey provides details on the more seriously injured and ill workers (occupations, age, sex, race, and length of service) and on the circumstances of their injuries and illnesses (nature of the injury/illness, part of body affected, event or exposure, and primary and secondary sources of the injury/illness). "More seriously" is defined in this survey as involving days away from work. This information is scheduled for publication in a news release in May 1996. A comprehensive bulletin containing additional details, for example, size of establishment and broad illness category, will be available in early 1997.

Incidence rates per 100 full-time employees for nonfatal workplace injuries and illnesses are presented in table 1; the corresponding number of nonfatal injuries and illnesses are presented in table 2. The annual survey estimates of the number and frequency (incidence rates) of nonfatal workplace injuries and illnesses are based on logs kept by private industry employers during the year. These records reflect the year's injury and illness experience as well as the employer's understanding of which cases are work-related under current recordkeeping guidelines of the U.S. Department of Labor. The number of injuries and illnesses reported in any given year also can be influenced by changes in the level of economic activity, working conditions and work practices, worker experience and training, and the number of hours worked.

Information in this report is available to sensory impaired individuals on request. Voice phone: (202) 606-7828, TDD phone: (202) 606-5897; TDD message referral phone: 1-800-326-2577. This material is in the public domain and, with appropriate credit, may be reproduced without permission. If you have questions about the information contained in this report, or for additional copies of this report, write to: Bureau of Labor Statistics, Office of Safety, Health and Working Conditions, Room 3180, 2 Massachusetts Avenue, NE., Washington, DC 20212-0001, or call (202) 606-6179.

Management and public relations	874	716.1	3.5	1.6	1.0	1.9	3.2	1.5	.9	1.7

¹ The incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: (N/EH) X 200,000, where

N = number of injuries and illnesses
 EH = total hours worked by all employees during the calendar year
 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

² Totals for divisions and 2- and 3-digit SIC codes include data for industries not shown separately.

³ *Standard Industrial Classification Manual*, 1987 Edition.

⁴ Employment is expressed as an annual average and is derived primarily from the BLS-State Current Employment Statistics program. Annual average employment for the agriculture, forestry, and fishing division is obtained from the Survey of Occupational Injuries and Illnesses.

⁵ Total includes cases involving restricted work activity only in addition to days-away-from-work cases with or without restricted work activity.

⁶ Days-away-from-work cases include those which result in days away from work with or without restricted work activity.

⁷ Excludes farms with fewer than 11 employees.

⁸ Data conforming to OSHA definitions for mining operators in coal, metal, and nonmetal mining and for employers in railroad transportation are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor; and the Federal Railroad Administration, U.S. Department of Transportation. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries.

NOTE: Because of rounding, components may not add to the totals. n.e.c. = not elsewhere classified.

— Data not available.

¹ Totals for divisions and 2- and 3-digit SIC codes include data for industries not shown separately.

² *Standard Industrial Classification Manual*, 1987 Edition.

³ Employment is expressed as an annual average and is derived primarily from the BLS-State Current Employment Statistics program. Annual average employment for the agriculture, forestry, and fishing division is obtained from the Survey of Occupational Injuries and Illnesses.

⁴ Total includes cases involving restricted work activity only in addition to days-away-from-work cases with or without restricted work activity.

⁵ Days-away-from-work cases include those which result in days away from work with or without restricted work activity.

⁶ Excludes farms with fewer than 11 employees.

⁷ Fewer than 50 cases.

⁸ Data conforming to OSHA definitions for mining operators in coal, metal, and nonmetal mining and for employers in railroad transportation are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor; and the Federal Railroad Administration, U.S. Department of Transportation. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries.

NOTE: Because of rounding, components may not add to the totals. n.e.c. = not elsewhere classified.

— Data not available.

Technical Notes

Data sources

Information in this report is from the Survey of Occupational Injuries and Illnesses, a Federal/State cooperative program in which employer reports are collected and processed by State agencies cooperating with the Bureau of Labor Statistics. A sample of 250,000 establishments representing the total private economy (except for mines and railroads) was surveyed for 1994.

The survey is limited to private industry. It excludes the self-employed, farms with fewer than 11 employees, private households, and employees in Federal, State and local government agencies. Under a separate system, agencies of the Federal Government file work injury and illness reports with the Secretary of Labor.

Nonfatal occupational injuries and illnesses for coal, metal and nonmetal mining, and railroad activities were reported, respectively, to the Bureau of Labor Statistics by the Mine Safety and Health Administration of the U.S. Department of Labor and by the Federal Railroad Administration of the U.S. Department of Transportation.

Scope and method of survey

Industries included in the survey. The survey includes the following private industries: Agriculture, forestry, and fishing, SIC 01–09; oil and gas extraction, SIC 13; sulfur mining, part of SIC 14; construction, SIC 15–17; manufacturing, SIC 20–39; transportation and public utilities, SIC 41–42 and 44–49; wholesale and retail trade, SIC 50–59; finance, insurance, and real estate, SIC 60–67; and services, SIC 70–87 and 89.

Survey exclusions. Excluded from the survey are self-employed individuals; farms with fewer than 11 employees; employees regulated by other Federal safety and health laws; and Federal, State, and local government agencies.

Industrial Classification. Reporting units are classified into industries by their principal product or activity. The data are tabulated according to the 1987 edition of the *Standard Industrial Classification Manual*.

Definitions

The definitions of occupational injuries and illnesses are from *Recordkeeping Guidelines for Occupational Injuries and Illnesses* (U.S. Department of Labor, Bureau of Labor Statistics, September 1986).

Nonfatal recordable injuries and illnesses are either:

1. Nonfatal occupational illnesses; or
2. Nonfatal occupational injuries which involve one or more of the following: loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment (other than first aid).

Occupational injury is any injury such as a cut, fracture, sprain, strain, amputation, etc., which results from a work event or from a single instantaneous exposure in the work environment.

Occupational illness is any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

Lost workday cases are cases which involve days away from work, or days of restricted work activity, or both.

Lost workday cases involving days away from work are those cases which result in days away from work, or a combination of days away from work and days of restricted work activity.

Incidence rates represent the number of injuries and/or illnesses per 100 full-time workers and were calculated as:

$$(N/EH) \times 200,000$$

where:

N = number of injuries and/or illnesses;

EH = total hours worked by all employees during the calendar year;

200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).
