## Mass Layoffs - December 2012 <br> Annual Totals - 2012

Employers took 1,509 mass layoff actions in December involving 137,839 workers as measured by new filings for unemployment insurance benefits during the month, the U.S. Bureau of Labor Statistics reported today. (Data are seasonally adjusted.) Each mass layoff involved at least 50 workers from a single employer. Mass layoff events decreased by 240 from November, and the number of associated initial claims decreased by 35,040. In December, 330 mass layoff events were reported in the manufacturing sector resulting in 35,211 initial claims. Monthly mass layoff data are identified using administrative data sources without regard to layoff duration. (See table 1 and the note at the end of this release.)

## Revision of Seasonally Adjusted Mass Layoff Data

Seasonally adjusted mass layoffs data have been revised using updated seasonal adjustment factors that incorporate 2012 data. Seasonally adjusted estimates back to January 2008 were subject to revision. Revised seasonally adjusted data from January 2009 forward are shown in table 1. The originally published and revised figures for January 2008-November 2012 will be available at www.bls.gov/mls/mlssarevision.htm, along with additional information about the revisions.

Table A. Six-digit NAICS industries with the largest number of mass layoff initial claims in December 2012, private nonfarm, not seasonally adjusted

| Industry | Initial claims | December peak |  |
| :---: | :---: | :---: | :---: |
|  |  | Year | Initial claims |
| Food service contractors | 16,517 | 2011 | 19,639 |
| School and employee bus transportation | 15,909 | 2012 | 15,909 |
| Temporary help services ${ }^{1}$ | 12,609 | 2011 | 19,987 |
| Highway, street, and bridge construction | 11,478 | 2005 | 20,030 |
| Motion picture and video production ... | 3,527 | 1998 | 16,192 |
| Hotels and motels, except casino hotels | 2,872 | 2008 | 3,528 |
| Landscaping services | 2,323 | 2011 | 3,146 |
| Wood kitchen cabinet and countertop mfg. | 1,960 | 2006 | 2,296 |
| Motor vehicle seating and interior trim mfg. | 1,942 | 2008 | 3,455 |
| Professional employer organizations ${ }^{1}$ | 1,927 | 2008 | 6,101 |

${ }^{1}$ See the Technical Note for more information on these industries.
The national unemployment rate was 7.8 percent in December, unchanged from the prior month and down from 8.5 percent a year earlier. Total nonfarm payroll employment increased by 155,000 over the month and by $1,835,000$ over the year.

## Industry Distribution (Not Seasonally Adjusted)

The number of mass layoff events in December was 1,973, not seasonally adjusted, resulting in 187,137 initial claims for unemployment insurance. (See table 2.) Over the year, the number of average weekly mass layoff events for December increased by 6 to 493, while associated average weekly initial claims decreased by 5,949 to 46,784 . Ten of the 19 major industry sectors in the private economy reported over-the-year decreases in average weekly initial claims, with the largest decrease occurring in manufacturing. (See table 3.) The six-digit industry with the largest number of private nonfarm initial claims due to mass layoffs was food service contractors. (See table A.)

In December, the manufacturing sector accounted for 25 percent of mass layoff events and 28 percent of associated initial claims in the private economy. Within manufacturing, the numbers of mass layoff claimants were highest in transportation equipment and in food. Sixteen of the 21 manufacturing subsectors experienced over-the-year decreases in average weekly initial claims. (See table 3.)

## Geographic Distribution (Not Seasonally Adjusted)

Among the census regions, the Midwest registered the largest number of initial claims due to mass layoffs in December. Three of the 4 regions experienced over-the-year decreases in average weekly initial claims, with the largest decrease occurring in the West. (See table 4.)

Among the states, California recorded the highest number of mass layoff initial claims in December, followed by Michigan, Pennsylvania, and Illinois. Twenty-five states experienced over-the-year

Table B. Number of mass layoff events and initial claimants
for unemployment insurance, 1996-2012, not seasonally adjusted

| Year | Layoff events | Initial claimants for unemployment insurance |
| :---: | :---: | :---: |
| 1996 | 14,111 | 1,437,628 |
| 1997 | 14,960 | 1,542,543 |
| 1998 | 15,904 | 1,771,069 |
| 1999 | 14,909 | 1,572,399 |
| 2000 ... | 15,738 | 1,835,592 |
| 2001. | 21,467 | 2,514,862 |
| 2002 | 20,277 | 2,245,051 |
| 2003. | 18,963 | 1,888,926 |
| 2004. | 15,980 | 1,607,158 |
| 2005. | 16,466 | 1,795,341 |
| 2006 | 13,998 | 1,484,391 |
| 2007 | 15,493 | 1,598,875 |
| 2008. | 21,137 | 2,130,220 |
| 2009 | 28,030 | 2,796,456 |
| 2010. | 19,564 | 1,854,596 |
| 2011 | 18,521 | 1,808,451 |
| 2012 | 17,080 | 1,666,931 |

decreases in average weekly initial claims, with the largest declines in California and Pennsylvania. (See table 4.)

## Review of 2012

In 2012, the annual totals of mass layoff events, at 17,080, and of initial claims, at 1,666,931, declined to their lowest levels since 2007. (See table B.) Eleven of the 19 major industry sectors in the private economy reported decreases in initial claims in 2012, led by administrative and waste services, manufacturing, and information. In 2012, total initial claims in the manufacturing sector declined to a series low 448,687.

The manufacturing sector accounted for 24 percent of all mass layoff events and 29 percent of initial claims filed in the private economy in 2012, down slightly from 2011 percentages. The number of manufacturing claimants in 2012 was highest in transportation equipment and in food. Total initial claims in 17 of the 21 manufacturing subsectors decreased in 2012 from 2011, with transportation equipment and wood products experiencing the largest declines.

The six-digit industry in the private nonfarm sector with the greatest number of initial claims in 2012 was temporary help services. Casino hotels entered the list of 10 industries with the highest initial claims for the entire year and reached a program high. (See table C.) Two other industries among these 10 reached program highs in 2012-school and employee bus transportation and food service contractors.

Table C. Six-digit NAICS industries with the largest number of mass layoff initial claims in 2012, private nonfarm, not seasonally adjusted

| Industry | 2011 |  | 2012 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Initial claims | Rank | Initial claims | Rank |
| Temporary help services ${ }^{1}$. | 143,938 | 1 | 126,304 | 1 |
| School and employee bus transportation | 95,287 | 2 | 104,960 | 2 |
| Food service contractors | 75,006 | 3 | 80,468 | 3 |
| Motion picture and video production | 47,988 | 4 | 40,022 | 4 |
| Highway, street, and bridge construction | 40,349 | 5 | 37,848 | 5 |
| Professional employer organizations ${ }^{1}$ | 31,916 | 6 | 26,394 | 6 |
| Discount department stores | 29,807 | 7 | 24,425 | 7 |
| Child day care services. | 23,237 | 8 | 22,180 | 8 |
| Supermarkets and other grocery stores | 19,781 | 9 | 19,490 | 9 |
| Casino hotels | 11,148 | 24 | 18,722 | 10 |

${ }^{1}$ See the Technical Note for more information on these industries.
Three of the 4 census regions reported over-the-year decreases in total annual initial claims from 2011 to 2012, with the largest decline occurring in the West. Among the states, California recorded the highest number of total annual mass layoff initial claims in 2012, followed by New York, Pennsylvania, New Jersey, and North Carolina. Thirty-six states and the District of Columbia experienced over-the-year decreases in total initial claims for the year, led by California, Wisconsin, Pennsylvania, and Florida.

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. For private nonfarm establishments, information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. The monthly data series in this release are subjected to average weekly analysis, which mitigates the effect of differing lengths of months. See the Technical Note for more detailed definitions and for a description of average weekly analysis.

The Extended Mass Layoffs news release for Fourth Quarter 2012 and Annual Totals for 2012 is scheduled to be released on Thursday, February 14, 2013, at 10:00 a.m. (EST) and will include information on the impact of Hurricane Sandy on MLS data. The Mass Layoffs new release for January 2013 is scheduled to be released on Tuesday, February 26, 2013, at 10:00 a.m. (EST).

## Technical Note

The Mass Layoff Statistics (MLS) program is a federalstate program that uses a standardized automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on employers which have at least 50 initial claims filed against them during a consecutive 5 -week period. These employers then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

The monthly data present preliminary mass layoff activity in the reference month and are not revised in subsequent months except in special circumstances (e.g., layoffs in states affected by Hurricane Katrina). Counts of initial claims associated with mass layoff events reflect activity through the end of the reference month. Additional mass layoff event and initial claims activity received after data for the reference month have been published by BLS are not updated in the monthly mass layoff series and, therefore, may not match revised mass layoff data issued in state publications. However, any additional mass layoff information meeting the extended mass layoff criteria will be reflected in BLS' quarterly publication of extended mass layoff data.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others, 5 weeks. The number of weeks in a given month may be different from year to year, and the number of weeks in a year may vary. Therefore, data users who intend to perform analysis of over-the-year change in the not seasonally adjusted series should use the average weekly mass layoff figures displayed in tables 3 and 4 of this release. The average weekly adjustment process produces a consistent series for each month across all years, permitting over-the-year analysis to be performed using strictly comparable data.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339

## Definitions

Average weekly mass layoff events and initial claimants. The number of events and initial claimants in a given month divided by the number of weeks contained within that month.

Employer. Employers in the MLS program include those covered by state unemployment insurance laws. Information on employers is obtained from the Quarterly Census of Employment and Wages (QCEW) program, which is administered by the Bureau of Labor Statistics (BLS).

Industry. Employers are classified according to the 2007 version of the North American Industry Classification System (NAICS). For temporary help and professional employer organization industries, monthly MLS-related statistics generally reflect layoffs related to underlying client companies in other industries. An individual layoff action at a client company can be small, but when initial claimants associated with many such layoffs are assigned to a temporary help or professional employer organization firm, a mass layoff event may trigger.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an employer during a 5-week period, regardless of duration.

## Seasonal adjustment

Effective with the release of data for January 2005, BLS began publishing six seasonally adjusted monthly MLS series. The six series are the numbers of mass layoff events and mass layoff initial claims for the total, private nonfarm, and manufacturing sectors.

Seasonal adjustment is the process of estimating and removing the effect on time series data of regularly recurring seasonal events such as changes in the weather, holidays, and the beginning and ending of the school year. The use of seasonal adjustment makes it easier to observe fundamental changes in time series, particularly those associated with general economic expansions and contractions.

The MLS data are seasonally adjusted using the X-12ARIMA seasonal adjustment method on a concurrent basis.

Concurrent seasonal adjustment uses all available monthly estimates, including those for the current month, in developing seasonal adjustment factors. Revisions to the most recent 5 years of seasonally adjusted data will be made once a year with the issuance of December data. Before the data are seasonally adjusted, prior adjustments are made to the original data to adjust them for differences in the number of weeks used to calculate the monthly data. Because weekly
unemployment insurance claims are aggregated to form monthly data, a particular month's value could be calculated with 5 weeks of data in 1 year and 4 weeks in another. The effects of these differences could seriously distort the seasonal factors if they were ignored in the seasonal adjustment process. These effects are modeled in the X-12ARIMA program and are permanently removed from the final seasonally adjusted series.

Table 1. Mass layoff events and initial claimants for unemployment insurance, January 2009 to December 2012, seasonally adjusted

| Date | Total |  | Private nonfarm |  | Manufacturing |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Average weekly analysis mitigates the effect of differing lengths of months. There were 5 weeks in December 2011 and 4 weeks in December 2012. Average weekly events and initial claimants may not sum to subtotals and totals
due to rounding.
${ }^{2}$ Data were reported by all states and the District of Columbia.
${ }^{3}$ Data do not meet BLS or state agency disclosure standards.
${ }^{4}$ Includes other industries not shown.
NOTE: Dash represents zero.
