MASS LAYOFFS - SEPTEMBER 2009

Employers took 2,561 mass layoff actions in September that resulted in the separation of 248,006 workers, seasonally adjusted, as measured by new filings for unemployment insurance benefits during the month, the U.S. Bureau of Labor Statistics reported today. Each action involved at least 50 persons from a single employer. The number of mass layoff events in September decreased by 129 from the prior month, and the number of associated initial claims decreased by 11,301 . Over the year, the number of mass layoff events increased by 271, and associated initial claims increased by 7,285. Year-to-date mass layoff events $(23,745)$ and initial claims $(2,410,208)$ both recorded program highs. In September, 856 mass layoff events were reported in the manufacturing sector, seasonally adjusted, resulting in 97,066 initial claims. Over the month, the number of manufacturing events decreased by 44, while associated initial claims increased by 3,174 . (See table 1.)

During the 22 months from December 2007 through September 2009, the total number of mass layoff events (seasonally adjusted) was 47,230 , and the number of initial claims filed (seasonally adjusted) in those events was $4,804,642$. (December 2007 was the start of a recession as designated by the National Bureau of Economic Research.)

The national unemployment rate was 9.8 percent in September 2009, seasonally adjusted, little changed from 9.7 percent the prior month and up from 6.2 percent a year earlier. In September, total nonfarm payroll employment decreased by 263,000 over the month and by 5,785,000 from a year earlier.

Table A. Industries with the largest number of mass layoff initial claims in September 2009, not seasonally adjusted

| Industry | Initial claims | September peak |  |
| :---: | :---: | :---: | :---: |
|  |  | Year | Initial claims |
| Temporary help services ${ }^{1}$ | 5,635 | 2001 | 12,752 |
| Construction machinery manufacturing | 3,452 | 2009 | 3,452 |
| Discount department stores ... | 3,446 | 2005 | 3,550 |
| Farm machinery and equipment manufacturing ... | 2,982 | 2009 | 2,982 |
| Automobile manufacturing. | 2,646 | 2004 | $\left({ }^{2}\right)$ |
| Professional employer organizations ${ }^{1}$ | 2,548 | 2008 | 4,520 |
| Motion picture and video production . | 2,431 | 1997 | 11,176 |
| Elementary and secondary schools . | 2,033 | 2005 | 15,815 |
| Hotels and motels, except casino hotels | 1,996 | 2001 | 10,886 |
| Nonresidential electrical contractors | 1,759 | 2009 | 1,759 |

${ }^{1}$ See the Technical Note for more information on these industries.
${ }^{2}$ Data do not meet BLS or state agency disclosure standards.

## Industry Distribution (Not Seasonally Adjusted)

The number of mass layoff events in September was 1,371 on a not seasonally adjusted basis; the number of associated initial claims was 123,177. (See table 2.) Over the year, the number of mass layoff events increased by 79, while associated initial claims decreased by 6,409 . Five of the 19 major industry sectors reported program highs in terms of average weekly initial claimants for the month of September: mining; utilities; wholesale trade; finance and insurance; and management of companies and enterprises. (Average weekly analysis mitigates the effect of differing lengths of months. See the Technical Note.)

The manufacturing sector accounted for 33 percent of all mass layoff events and 42 percent of initial claims filed in September 2009. A year earlier, manufacturing made up 28 percent of events and 36 percent of initial claims. Within manufacturing, the number of claimants in September was greatest in machinery $(12,389)$ and transportation equipment $(7,331)$. (See table 3.) The construction sector accounted for 12 percent of mass layoff events and 9 percent of initial claims.

Of the 10 detailed industries with the largest number of mass layoff initial claims, 3 reached a series high for September: nonresidential electrical contractors; farm machinery and equipment manufacturing; and construction machinery manufacturing. This September, the industry with the largest number of initial claims was temporary help services. (See table A.)

## Geographic Distribution (Not Seasonally Adjusted)

Among the 4 census regions, the Midwest registered the highest number of initial claims in September due to mass layoffs $(38,137)$, followed by the West $(37,480)$ and the South $(28,943)$. (See table 5.) Initial claims associated with mass layoffs increased over the year in 2 of the 4 regions, with the Midwest experiencing the largest increase ( $+11,491$ ). In 2009, the Midwest reported its highest September level of average weekly initial claims $(9,534)$ in program history.

Of the 9 geographic divisions, the Pacific had the highest number of initial claims due to mass layoffs in September, followed by the East North Central and the Middle Atlantic. (See table 5.) Seven of the 9 divisions experienced over-the-year increases in initial claims, led by the East North Central $(+7,217)$. This year, the East North Central division reached a program high for September in terms of average weekly initial claims.

California recorded the highest number of initial claims in September, with 28,797, even though it had an over-the-year decrease in initial claims ( $-5,787$ ). The over-the-year decrease in California was largely due to a drop in claims from the administrative and support services industry. The states with the next highest number of mass layoff initial claims were Illinois (10,743), Pennsylvania (8,587), and Michigan $(6,167)$. (See table 6.) Twenty-eight states experienced over-the-year increases in initial claims, led by Illinois, Pennsylvania, and Kansas. In 2009, six states reached program highs in average weekly initial claims for the month of September: Alaska, Colorado, Illinois, Iowa, Kansas, and Wisconsin.

Louisiana registered the largest decrease in initial claims from September of 2008, when Hurricane Gustov contributed to higher layoff activity.

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. For private nonfarm establishments, information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 4.) See the Technical Note for more detailed definitions.

[^0]
## Technical Note

The Mass Layoff Statistics (MLS) program is a federalstate program that uses a standardized automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on employers which have at least 50 initial claims filed against them during a consecutive 5-week period. These employers then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others, 5 weeks. The number of weeks in a given month may be different from year to year, and the number of weeks in a year may vary. Therefore, analysis of over-the-month and over-the-year change in not seasonally adjusted series should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339

## Definitions

Employer. Employers in the MLS program include those covered by state unemployment insurance laws. Information on employers is obtained from the Quarterly Census of Employment and Wages (QCEW) program, which is administered by the Bureau of Labor Statistics (BLS).

Industry. Employers are classified according to the 2007 version of the North American Industry Classification System (NAICS). For temporary help and professional employer organization industries, monthly MLS-related statistics generally reflect layoffs related to underlying client companies in other industries. An individual layoff action at a client company can be small, but when initial claimants
associated with many such layoffs are assigned to a temporary help or professional employer organization firm, a mass layoff event may trigger.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an employer during a 5-week period, regardless of duration.

## Seasonal adjustment

Effective with the release of data for January 2005, BLS began publishing six seasonally adjusted monthly MLS series. The six series are the numbers of mass layoff events and mass layoff initial claims for the total, private nonfarm, and manufacturing sectors.

Seasonal adjustment is the process of estimating and removing the effect on time series data of regularly recurring seasonal events such as changes in the weather, holidays, and the beginning and ending of the school year. The use of seasonal adjustment makes it easier to observe fundamental changes in time series, particularly those associated with general economic expansions and contractions.

The MLS data are seasonally adjusted using the X-12ARIMA seasonal adjustment method on a concurrent basis. Concurrent seasonal adjustment uses all available monthly estimates, including those for the current month, in developing seasonal adjustment factors. Revisions to the most recent 5 years of seasonally adjusted data will be made once a year with the issuance of December data. Before the data are seasonally adjusted, prior adjustments are made to the original data to adjust them for differences in the number of weeks used to calculate the monthly data. Because weekly unemployment insurance claims are aggregated to form monthly data, a particular month's value could be calculated with 5 weeks of data in 1 year and 4 weeks in another. The effects of these differences could seriously distort the seasonal factors if they were ignored in the seasonal adjustment process. These effects are modeled in the X-12ARIMA program and are permanently removed from the final seasonally adjusted series.

Table 1. Mass layoff events and initial claimants for unemployment insurance, October 2005 to September 2009, seasonally adjusted

| Date | Total |  | Private nonfarm |  | Manufacturing |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^3]
[^0]:    Extended Mass Layoffs in the Third Quarter of 2009 is scheduled to be released on Tuesday, November 10, 2009, at 10:00 a.m. (EST). Mass Layoffs in October 2009 is scheduled to be released on Friday, November 20, 2009, at 10:00 a.m. (EST).

[^1]:    ${ }^{1}$ Data were reported by all states and the District of Columbia.
    ${ }^{2}$ Data do not meet BLS or state agency disclosure standards.

[^2]:    ${ }^{1}$ The event realization rate is the percentage of all private nonfarm mass layoff events lasting more than 30 days. The initial claimant realization rate is the percentage of all private nonfarm mass layoff initial claimants associated with layoffs lasting more than 30 days.
    ${ }^{2}$ These quarterly numbers are provisional and will be revised as more

[^3]:    ${ }^{1}$ See footnote 1, table 3.
    ${ }^{2}$ Data do not meet BLS or state agency disclosure standards.
