## MASS LAYOFFS IN SEPTEMBER 2006

In September 2006, employers took 1,132 mass layoff actions, seasonally adjusted, as measured by new filings for unemployment insurance benefits during the month, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Each action involved at least 50 persons from a single establishment, and the number of workers involved totaled 116,773, on a seasonally adjusted basis. The number of layoff events decreased by 61 from the prior month, and the number of associated initial claims decreased by 11,171. During September 2006, 381 mass layoff events were reported in the manufacturing sector, seasonally adjusted, resulting in 45,040 initial claims. The number of events in manufacturing was higher than a month earlier, while the number of initial claims decreased. (See table 1.)

Chart 1. Mass layoff events, seasonally adjusted, October 2001-Septem ber 2006

Chart 2. Mass layoff initial claims, seasonally adjusted, October 2001-September 2006

Compared with September 2005, which included the effects of Hurricane Katrina, September 2006 shows a sharp decrease in the number of events and associated initial claims. In September 2005, 2,219 layoff events and 283,772 associated initial claims, seasonally adjusted, were reported.

In September 2006, the national unemployment rate was 4.6 percent, seasonally adjusted, essentially unchanged from 4.7 percent in August 2006 and down from 5.1 percent a year earlier. Total nonfarm payroll employment, seasonally adjusted, increased by 51,000 over the month and by about 1.8 million over the year.

Table A. Industries with the largest mass layoff initial claims in September 2006

| Industry | Initial claims | September peak |  |
| :---: | :---: | :---: | :---: |
|  |  | Year | Initial claims |
| Temporary help services | 4,543 | 2001 | 12,752 |
| Professional employer organizations . | 2,623 | 2006 | 2,623 |
| Light truck and utility vehicle manufacturing. | 2,532 | 2000 | 3,688 |
| AC, refrigeration, and forced air heating. | 2,381 | 2006 | 2,381 |
| Motion picture and video production ... | 2,226 | 1997 | 11,176 |
| Motor vehicle seating and interior trim manufacturing $\qquad$ | 1,920 | 2006 | 1,920 |
| General medical and surgical hospitals ................. | 1,876 | 2005 | 11,533 |
| Supermarkets and other grocery stores ............. | 1,456 | 2005 | 4,873 |
| Discount department stores .... | 1,247 | 2005 | 3,550 |
| Warehouse clubs and supercenters | 1,124 | 2002 | 1,218 |

## Industry Distribution (Not Seasonally Adjusted)

The 10 industries reporting the highest number of mass layoff initial claims, not seasonally adjusted, accounted for 21,928 initial claims in September, 25 percent of the total. The three industries with the highest number of initial claims were temporary help services with 4,543, professional employer organizations with 2,623 , and light truck and utility vehicle manufacturing with 2,532 . Together, these three industries accounted for 11 percent of all initial claims due to mass layoffs in September. (See table A.)

The manufacturing sector accounted for 34 percent of all mass layoff events and 45 percent of all initial claims filed in September; a year earlier, manufacturing comprised 19 percent of events and 22 percent of initial claims. Manufacturing accounted for a smaller percentage of events and initial claims in September 2005 because of the significant impact of Hurricane Katrina on all industries located in the affected areas. In September 2006, the number of manufacturing claimants was highest in transportation equipment manufacturing (13,330, mostly automotive-related), followed by machinery manufacturing (4,772). (See table 3.)

Administrative and waste services accounted for 13 percent of events and 11 percent of initial claims filed in September, with layoffs mostly in temporary help services and professional employer organizations. Construction accounted for 11 percent of events and 8 percent of initial claims during the month, with the majority from specialty trade contractors. Retail trade accounted for 8 percent of both events and initial claims in September, primarily from general merchandise stores.

Government establishments accounted for 5 percent of both events and initial claims filed in September, mostly from educational services and executive, legislative, and general government.

On a not seasonally adjusted basis, the number of layoff events in September 2006, at 865, was down by 797 from a year earlier, and the number of associated initial claims decreased by 125,582 to 87,699. (See table 2.) The largest over-the-year decreases in initial claims were reported in industries that were particularly affected by Hurricane Katrina including: educational services (-18,180), accommodation (-13,898), and food services and drinking places ( $-12,948$ ). The largest over-the-year increases in initial claims were reported in furniture and related product manufacturing ( $+1,320$ ) and fabricated metal product manufacturing (+925).

From January through September 2006, the total number of initial claims, at 994,898, was the lowest reported for any January-September period since 1996.

## Geographic Distribution (Not Seasonally Adjusted)

Among the four census regions, the highest number of initial claims in September due to mass layoffs was in the West, 25,910 . Administrative and support services and specialty trade contractors accounted for 27 percent of all mass layoff initial claims in that region during the month. The Midwest had the second largest number of initial claims, 25,348, followed by the South, 23,990, and the Northeast, 12,451. (See table 5.)

The number of initial claimants in mass layoffs increased over the year in two of the four regions-the Midwest $(+4,324)$ and the Northeast $(+2,461)$. The regional decreases were in the South $(-130,009)$ and the West $(-2,358)$. In September 2005, the South had experienced a substantial increase of initial claimants in Louisiana and Mississippi as a result of Hurricane Katrina. Six geographic divisions had over-the-year increases in the number of initial claims associated with mass layoffs, with the largest increases in East North Central $(+2,162)$ and West North Central $(+2,162)$. Of the three divisions with over-the-year decreases, the largest were in West South Central $(-104,453)$ and East South Central $(-26,116)$.

Among the states, California recorded the highest number of initial claims filed due to mass layoff events in September $(21,642)$, followed by Ohio $(5,276)$, Kentucky $(5,133)$, Pennsylvania $(4,895)$, and Michigan $(4,072)$. These five states accounted for 51 percent of all mass layoff events and 47 percent of all initial claims for unemployment insurance. (See table 6.)

Ohio had the largest over-the-year increase in the number of initial claims ( $+2,868$ ), largely due to layoffs in transportation equipment manufacturing. Minnesota had the next largest increase in initial claims $(+1,636)$, followed by Pennsylvania $(+1,432)$. The largest over-the-year decreases in claims occurred in Louisiana (-102,347) and Mississippi $(-25,970)$.

From January to September, California reported 229,695 mass layoff initial claims, 23 percent of the national total. The states with the next largest number of claims over this period were Michigan $(88,054)$, Pennsylvania $(59,674)$, New York $(57,414)$, and Ohio $(56,555)$.

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. For private nonfarm establishments, information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 4.) See the Technical Note for more detailed definitions.

The report on Extended Mass Layoffs in the Third Quarter of 2006 is scheduled to be released on Wednesday, November 15, 2006. The report on Mass Layoffs in October 2006 is scheduled to be released on Friday, November 24, 2006.

## Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on establishments which have at least 50 initial claims filed against them during a consecutive 5-week period. These establishments then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others, 5 weeks, the number of weeks in a given month may be different from year to year, and the number of weeks in a year may vary. Therefore, analysis of over-the-month and over-theyear change in not seasonally adjusted series should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

## Definitions

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an establishment during a 5-week period, regardless of duration.

## Seasonal adjustment

Effective with the release of data for January 2005, BLS began publishing six seasonally adjusted monthly MLS series. The six series are the numbers of mass layoff events and mass layoff initial claims for the total, private nonfarm, and manufacturing sectors.

Seasonal adjustment is the process of estimating and removing the effect on time series data of regularly recurring seasonal events such as changes in the weather, holidays, and the beginning and ending of the school year. The use of seasonal adjustment makes it easier to observe fundamental changes in time series, particularly those associated with general economic expansions and contractions.

The MLS data are seasonally adjusted using the X-12ARIMA seasonal adjustment method on a concurrent basis. Concurrent seasonal adjustment uses all available monthly estimates, including those for the current month, in developing seasonal adjustment factors. Revisions to the most recent 5 years of seasonally adjusted data will be made once a year with the issuance of December data. Before the data are seasonally adjusted, prior adjustments are made to the original data to adjust them for differences in the number of weeks used to calculate the monthly data. Because weekly unemployment insurance claims are aggregated to form monthly data, a particular month's value could be calculated with 5 weeks of data in one year and 4 weeks in another. The effects of these differences could seriously distort the seasonal factors if they were ignored in the seasonal adjustment process. These effects are modeled in the X-12ARIMA program and are permanently removed from the final seasonally adjusted series.

Table 1. Mass layoff events and initial claimants for unemployment insurance, October 2002 to September 2006, seasonally adjusted

| Date | Total |  | Private nonfarm |  | Manufacturing |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ The event realization rate is the percentage of all private nonfarm mass layoff events lasting more than 30 days. The initial claimant realization rate is the percentage of all private nonfarm mass layoff initial claimants associated with layoffs lasting more than 30 days.
${ }^{2}$ These quarterly numbers are provisional and will be revised as more data on these layoffs become available. Experience suggests that the
number of extended mass layoff events is generally revised upwards by less than 10 percent and the number of initial claimants associated with such events increases by 25-40 percent.
${ }^{p}=$ preliminary.
