## MASS LAYOFFS IN OCTOBER 2002

Employers initiated 1,497 mass layoff actions in October 2002, as measured by new filings for unemployment insurance benefits during the month, according to the U.S. Department of Labor's Bureau of Labor Statistics. Each action involved at least 50 persons from a single establishment, and the number of workers involved totaled 171,088 . (See table 1.) Almost 10 percent of the initial claims in October $2002(16,548)$ were in the temporary help services industry. In October 2001, which included the initial direct and indirect effects of the September 11 terrorist attacks, there were 1,831 mass layoff events involving 215,483 workers. In January through October 2002, both the total number of events, 15,649, and initial claims, 1,740,828, were lower than in January-October 2001 (16,306 and 1,950,013, respectively).

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. Information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs") and provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 1.) See the Technical Note for more detailed definitions.

## Industry Distribution

Manufacturing industries accounted for 33 percent of all mass layoff events and 38 percent of all initial claims filed in October. A year earlier, layoffs in this sector accounted for 41 percent of events and 50 percent of initial claims. Within manufacturing, the number of initial claimants was highest in food processing ( 12,111 , mostly in fruits and vegetables) and machinery ( 8,309 , largely in construction machinery), followed by computer and electronic products $(6,926)$ and transportation equipment $(6,856)$. (See table 2.)

Fifteen percent of all layoff events and 16 percent of all initial claims filed during the month were in administrative and waste services, mostly in temporary help services. Twelve percent of the events and 9 percent of initial claims in October were from agriculture, forestry, fishing and hunting, largely among farm labor contractors and crew leaders. Retail trade accounted for 7 percent of events and 9 percent of initial claims, primarily in general merchandise stores. Construction contributed 8 percent to all events and 6 percent to all initial claims this October, mainly from specialty trade contractors. An additional 4 percent of events and 5 percent of initial claims were from the information sector, mostly in the motion picture and sound recording industries.

Government establishments accounted for 3 percent of events and of initial claims filed during the month, particularly in elementary and secondary schools.

Compared with October 2001, the largest decreases in initial claims were reported in transportation equipment manufacturing $(-24,780)$, professional and technical services $(-5,522)$, air transportation $(-5,366)$, and accommodation services $(-5,365)$. The largest over-the-year increase in initial claims was reported in agriculture and forestry support activities $(+7,179)$.

Geographic Distribution
Among the four regions, the highest number of initial claims in October due to mass layoffs was in the West, 77,051. (See table 3.) Administrative and support services and agricultural support activities accounted for 36 percent of all initial claims in that region during the month. The Midwest followed with 37,561 initial claims (mainly in machinery manufacturing), then the South, with 35,515 (largely in administrative and support services). The Northeast continued to report the lowest number of initial claims, 20,961 , mostly in general merchandise stores.

The number of initial claimants in mass layoffs declined over the year in three of the four geographic regions. The largest decrease occurred in the Midwest ( $-31,253$ ), largely in transportation equipment manufacturing. Eight of the nine geographic divisions reported over-the-year decreases in the number of initial claims associated with mass layoffs, with the largest declines in the East North Central $(-20,261)$ and West North Central $(-10,992)$ divisions. Only the Pacific division reported an increase $(+14,049)$.

California had the largest number of initial claims filed in mass layoff events this October, 65,044, mostly in administrative and support services and in agriculture and forestry support activities, followed by Illinois $(8,676)$, Pennsylvania $(8,480)$, and Texas $(8,470)$. These four states accounted for 55 percent of all layoff events and 53 percent of initial claims for unemployment insurance. (See table 4.) Thus far this year, 471,121 mass layoff initial claims were filed in California, 27 percent of the national total. The states with the next largest number of claims were Texas $(104,703)$ and Pennsylvania $(98,206)$.

Missouri reported the largest over-the-year decrease in initial claims $(-7,606)$, followed by Ohio $(-6,257)$ and Michigan ( $-6,238$ ). The largest over-the-year increase occurred in California ( $+16,728$ ).

The report on Mass Layoffs in November 2002 will be issued on Tuesday, December 24, 2002.

## Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on establishments which have at least 50 initial claims filed against them during a consecutive 5 -week period. These establishments then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others 5 weeks, and the number of weeks in a given month may be different from year to year. Therefore,
analysis of over-the-month and over-the-year change should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

## Definitions

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an establishment during a 5 -week period, regardless of duration.

[^0]NOTE: Beginning with data for January 2002, the 2002 version of the North American Industry Classification System (NAICS) is the basis for the assignment and tabulation of economic data by industry. NAICS is the product of a cooperative effort on the part of
the statistical agencies of the United States, Canada, and Mexico. Due to differences in NAICS and SIC structures, data by industry for 2002 will not be comparable to the SIC-based data for earlier years. However, the monthly historical industry series from April 1995 to December 2001 are available on both SIC and NAICS bases. Dash represents zero.
